DETAILED ACTION

Restriction Requirement

1. Applicants' election of Group I, Claims 8-21, in Paper No. 6 is acknowledged. Because applicants did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

2. Claims 1-7 are withdrawn from consideration. Therefore, Claims 8-21 are now under consideration.

Claim Rejections - 35 U.S.C. § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. **Claims 8-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Ushiyama et al (US 6,245,659).**

Art Unit: 2812

5. Ushiyama et al disclose forming a first silicon oxide layer by reacting a silicon compound such as monosilane or disilane with hydrogen peroxide at a temperature of 0-20 degrees Celcius by a reduced pressure chemical vapor deposition. See column 11, lines 30-55. Moreover, Ushiyama et al disclose forming a second porous silicon oxide layer by reacting a silicon compound with at least one oxygen and a compound including oxygen, and a compound including an impurity such as phosphorus. See column 11, line 65 to column 12, line 30. Ushiyama et al also discloses an anneal treatment for the silicon oxide. See column 12, lines 30-50. Furthermore, Ushiyama et al discloses forming a wetting layer on the dielectric layer, forming a metal wiring layer over the wetting layer and forming a pad section by patterning the wetting layer and the metal wiring layer. See column 14, lines 40-65 and column 16, lines 35 -65. Therefore, claims 8-21 are anticipated by Ushiyama et al.
